

Benefits of the invisibleSHIELD™:

The unique qualities of the invisibleSHIELD™ have established ZAGG as the market leader in providing protective film coverings for personal electronics. Exceptionally clear and virtually indestructible, the invisibleSHIELD™ is made from a polyurethane film that was originally designed for the U.S. Military to protect helicopter blades from scratching and chipping. With over a million devices covered, ZAGG has still only scratched the surface of the personal electronics market.

The authentic invisibleSHIELD™ film also features Nano-Memory™ technology, which is visible as a very subtle texture in the surface of the film. This superior component of the invisibleSHIELD™ offers four main competitive benefits:

- **DURABILITY - Self-healing properties offer unbelievable resistance to scratches and damage, and will extend the life of your device**
- **COVERAGE - Greater pliability and flexibility allows the invisibleSHIELD™ designs to cover the corners and curves of your device better than the competition.**
- **EASE OF INSTALL – The improved pliability and adhesive facilitates easier installation**
- **DROP RESISTANT – Improved grip makes it easier to hang onto your expensive gadgets**

ZAGG is on the cutting edge of the electronics industry – we develop the finest protective solutions for the hottest gadgets as they are released. We have over 2,500 device-specific invisibleSHIELD™ designs, which is more than everyone else combined. Our amazing custom design team can create an invisibleSHIELD™ for any other device we may not have.
